

# Template Borders Explained

## Text Safe Area:

Our standard text safe area is 3mm smaller on each edge than the finished size of the card. Inside this area is safe for all information to be as well as graphics. If there is any text or graphics outside this area then there is a chance that it will get cut off when the card is trimmed.

## Bleed:

Bleed is added to give continuous colour and/or image right to the edge of a job. Without bleed a white edge may appear when the job is trimmed to final size. Please allow a minimum of 1.5mm bleed on all edges on all jobs.

## Page Border:

This border must be left on the template so that our software can recognise the edge of the document.
